

# Datos del Paciente

Nombre: Hermenegilda Luarca    Edad: 120 años    Sexo: Femenino

# Resultados de la Analítica de Sangre

| Prueba                          | Resultado           | Unidad           | Rango de Referencia |
|---------------------------------|---------------------|------------------|---------------------|
| <b>Bioquímica general</b>       |                     |                  |                     |
| Glucosa                         | 92                  | mg/dL            | 70 – 110            |
| HbA1c                           | 3.1                 | %                | 4.0 – 5.6           |
| Hierro sérico                   | 40 *                | μ/dl             | 50 – 150            |
| Ferritina                       | 10 *                | ng/ml            | 12 – 300            |
| Colesterol Total                | 180                 | mg/dL            | < 200               |
| Triglicéridos                   | 150                 | mg/dL            | < 200               |
| Sodio                           | 140                 | mEq/L            | 136 – 146           |
| Potasio                         | 5                   | mEq/L            | 3.5 – 5.1           |
| Calcio                          | 9.5                 | mg/dL            | 8.5 – 10.5          |
| B12                             | 300                 | pg/mL            | 200 – 900           |
| Ácido fólico                    | 4                   | ng/mL            | 3 – 17              |
| <b>Hematimetría</b>             |                     |                  |                     |
| Hemoglobina                     | 9.1 *               | g/dL             | 13.5 – 17.5         |
| Hematocrito                     | 38 *                | %                | 40 – 54             |
| VCM                             | 75 *                | fL               | 80 – 100            |
| Hematíes                        | 5.1*10 <sup>6</sup> | μ/L              | 4.5 – 6.1           |
| HCM                             | 29                  | pg               | 27 – 33             |
| CHCM                            | 33                  | g/dL             | 32 – 36             |
| RDW (ADE)                       | 13                  | %                | 11.5 – 14.5         |
| Reticulocitos                   | 1.0                 | %                | 0.5 – 2.5           |
| Leucocitos                      | 7000                | /mm <sup>3</sup> | 4500 – 11000        |
| Plaquetas                       | 280000              | /mm <sup>3</sup> | 150000 – 450000     |
| VPM (Volumen Plaquetario Medio) | 9.0                 | fL               | 7.5 – 11.5          |
| Leucocitos                      | 12000               | /mm <sup>3</sup> | 4500 – 11000        |
|                                 | 50 %                | %                | 40 % - 70 %         |
| Neutrófilos                     | 8000                | /mm <sup>3</sup> | 1800 – 7000         |
|                                 | 23 %                | %                | 10 % - 30 %         |
| Linfocitos                      | 2500                | /mm <sup>3</sup> | 1000 – 4000         |
|                                 | 14 %                | %                | 10 % - 20 %         |
| Monocitos                       | 600                 | /mm <sup>3</sup> | 200 – 800           |
|                                 | 5 %                 | %                | 0 % - 10 %          |
| Eosinófilos                     | 200                 | /mm <sup>3</sup> | 0 – 500             |
